Continuity

Engineering handovers backed by evidence

Oracle00999 / Solo project

Agent-Native Hackathon 2026

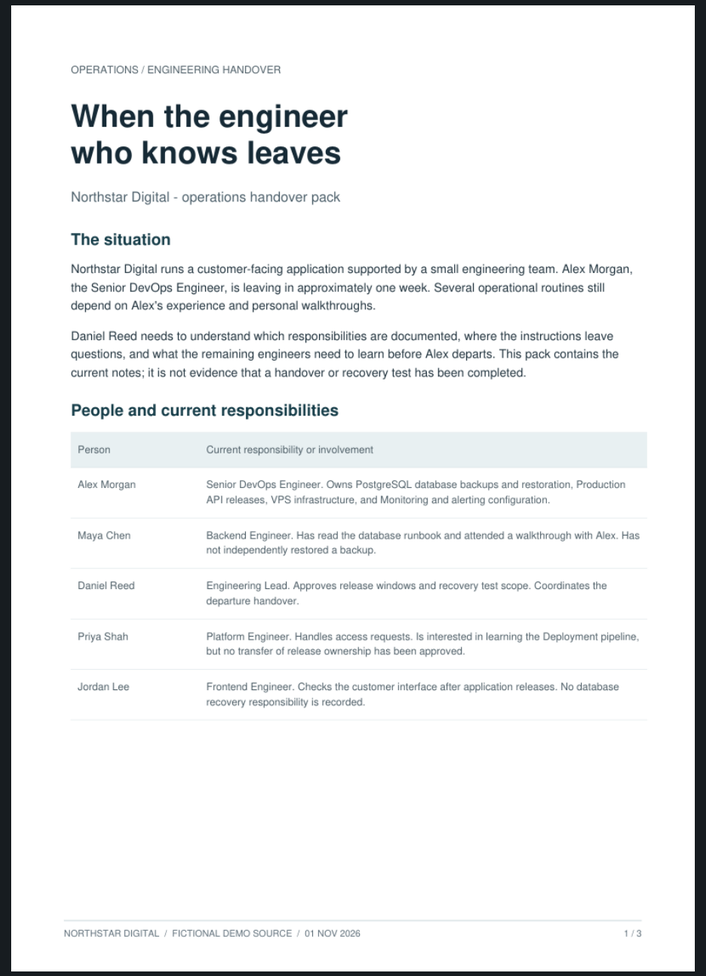

The handover problem

Alex leaves in one week

The team has operational notes, but another engineer has not independently restored a backup.

Responsibilities need to be checked. Missing instructions need follow-up. Replacement ownership needs approval.

Fictional Northstar Digital scenario

OPERATIONS / ENGINEERING HANDOVER

When the engineer who knows leaves

Northstar Digital - operations handover pack

The situation

Northstar Digital runs a customer-facing application supported by a small engineering team. Alex Morgan, the Senior DevOps Engineer, is leaving in approximately one week. Several operational routines still depend on Alex's experience and personal walkthroughs.

Daniel Reed needs to understand which responsibilities are documented, where the instructions leave questions, and what the remaining engineers need to learn before Alex departs. This pack contains the current notes; it is not evidence that a handover or recovery test has been completed.

People and current responsibilities

Person	Current responsibility or involvement
Alex Morgan	Senior DevOps Engineer. Owns PostgreSQL database backups and restoration, Production API releases, VPS infrastructure, and Monitoring and alerting configuration.
Maya Chen	Backend Engineer. Has read the database runbook and attended a walkthrough with Alex. Has not independently restored a backup.
Daniel Reed	Engineering Lead. Approves release windows and recovery test scope. Coordinates the departure handover.
Priya Shah	Platform Engineer. Handles access requests. Is interested in learning the Deployment pipeline, but no transfer of release ownership has been approved.
Jordan Lee	Frontend Engineer. Checks the customer interface after application releases. No database recovery responsibility is recorded.

NORTHSTAR DIGITAL / FICTIONAL DEMO SOURCE / 01 NOV 2026 1 / 3

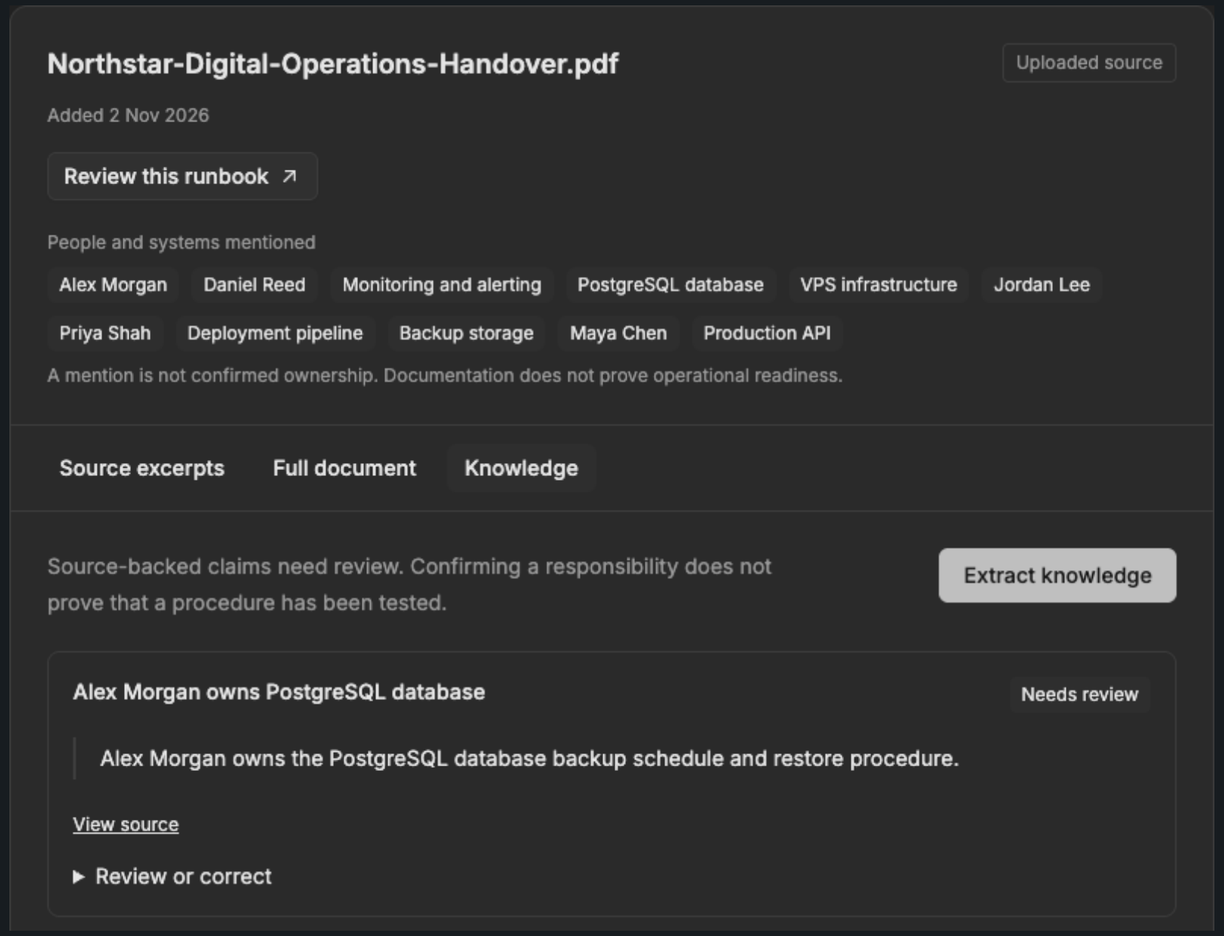

The workflow

01 Upload a handover document

02 Extract documented responsibilities

03 Inspect the supporting passages

04 Review risks and draft the plan

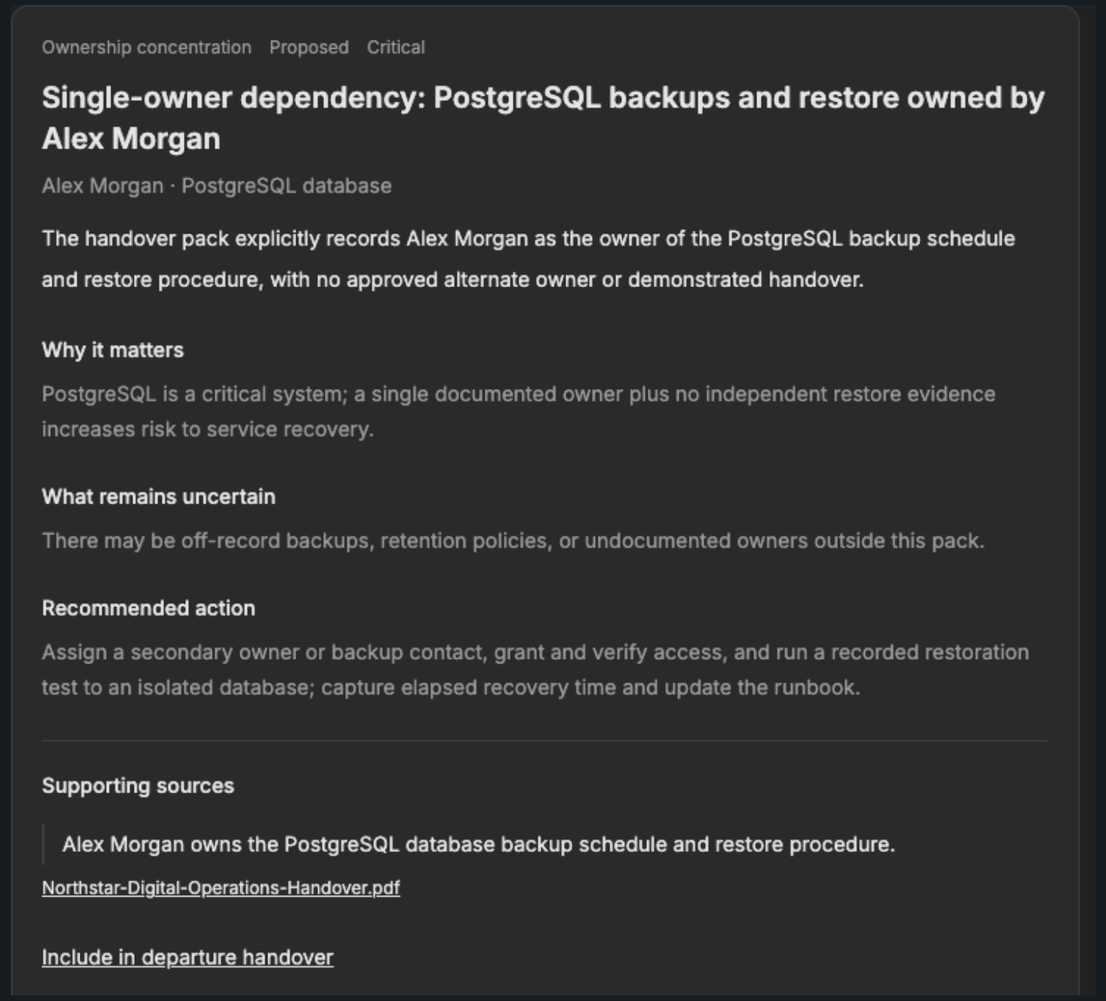

Actual app capture: candidate claim with its source

Evidence and human review

A proposed finding includes its supporting passage, remaining uncertainty and a practical follow-up.

People inspect and correct the agent's work. New claims remain unconfirmed until reviewed.

Documentation is not proof of readiness

Built with Agent-Native

Shared actions

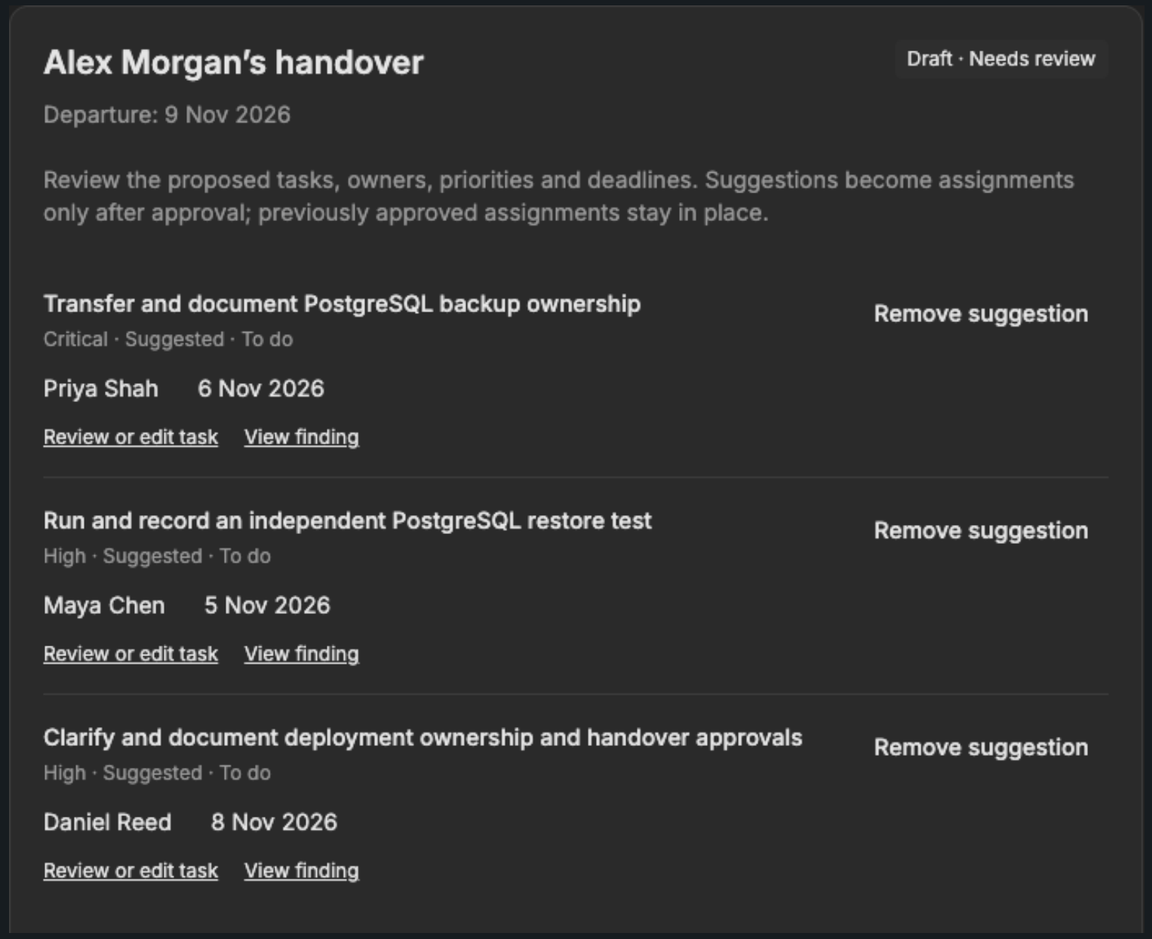

The Analyst and interface call the same validated operations.

Persistent records

Saved claims, risks and tasks appear in both the UI and the conversation.

Explicit approval

Suggested assignments remain drafts until a person approves them.

Actual app capture: saved handover draft

Working demo

Fictional Northstar Digital snapshot

1	10	3	3
uploaded PDF	candidate claims	proposed risks	draft tasks

No independent procedure test result was recorded
